PROFILE

Product Designer specialized in complex B2B systems and platforms —where operations, business, regulation, and technical constraints converge. I come from full-stack development: I solve the structural problem before opening Figma, design end-to-end, and work side by side with engineering. 4+ years in software, 3+ of them focused on product design.

EXPERIENCE

Freelance Product / UX·UI Designer Jan 2026 – Present

Independent · Remote

- **Own client engagements end-to-end** — discovery, information architecture and interaction design through to developer handoff — embedded with in-house engineering teams.
- Design of landing pages and marketing sites, from concept to responsive UI, in coordination with development.

Product Designer — OneInfo Consulting Oct 2024 – Dec 2025

Remote · Product consultancy · Client: healthcare institution in a regulated environment.

Framing & discovery

- Led the end-to-end redesign of a regulated healthcare institution's enrollment —a 100% manual, fragmented process with no traceability or metrics— and diagnosed that the problem was not the interface but the operating model.

Decision & leadership

- Drove alignment across 4 areas with competing priorities (Legal, Operations, Medical Audit, and Development) within a strict regulatory framework and legacy systems, using prototypes as a decision-making tool to lock scope before building.
- Established a selective-automation model: simple cases resolve without manual intervention, and human review is reserved for where it adds real judgment.

Impact

- Cut enrollment from days to ~15 minutes in production and trimmed ~40% of the questions in the sworn health declaration; consolidated 3 legal documents into 1, with per-stage metrics that left the process ready to iterate and scale.

EDSA Oct 2021 – Sep 2024

Hybrid / Remote · Estrategias Diferenciadas S.A. — Argentine software & IT-services company for the corporate segment (software factory, consulting, digital transformation).

From full-stack development to product design within the same company.

UX/UI Designer · Jul 2022 – Sep 2024

- Defined information architecture, user flows, and requirements from early stages alongside PMs, developers, and stakeholders, translating complex business logic —industrial ordering, loyalty programs, B2B platforms— into workable flows.
- Established and evolved UI Kits and Design Systems that sustained consistency across multiple products and sped up the team's delivery.

Full Stack Developer · Oct 2021 – Jul 2022

- Built and maintained web applications, gathering requirements directly with clients: the technical foundation I use today to design with engineering, not against it.

HABILIDADES

Specialization

Complex systems · B2B / Enterprise products · Operations · Regulated environments · Technical constraints

Product

Product Discovery · Product Strategy · Product Thinking · Information Architecture · Complex Workflows · User Flows · Interaction Design · Dashboard Design

Sistemas

Design Systems · Component Libraries · Design Tokens

Delivery

Cross-functional Collaboration · Stakeholder Management · Developer Handoff · Agile/Scrum

Base técnica (ex full-stack)

HTML · CSS · JavaScript · React · Git · understanding of architecture and engineering constraints

Tools

Figma · FigJam · Miro · Framer · Jira · Notion · Adobe CC

Languages

Spanish (native) · English (intermediate, actively improving)

EDUCATION

Google UX Design Professional Certificate · Coursera · 2025

UX/UI Design · CoderHouse · 2023

University Technical Degree in Software Application Development · UNICEN · En pausa
